Disposal Branch, Solid & Hazardous Waste Research Division  
Environmental Research Center, Cincinnati

THRU: Francis T. Mayo, Director  
Municipal Environmental Research Laboratory  
Environmental Research Center, Cincinnati

As per our discussion in Cincinnati last week, I am formally requesting technical assistance in the analysis of samples to be collected at the Llangollen Landfill Site in Delaware.

During the week of February 14, 1977, single grab samples will be collected at seven sampling wells at the Landfill.

We are requesting a complete GC-mass spec. scan of each of the seven samples. After identification of any toxic substance and known or suspected carcinogen in the parts per billion range, further work on these identified substances will be necessary to quantify these compounds. Your primary coordinator will be Mr. Ort Villa, Director of the Surveillance and Analysis Laboratory in Annapolis, Maryland. He may be reached at FTS 8-922-3752.

Thank you in advance for your valuable assistance.
